

TE AUKAHA* Māori AGRIBUSINESS PROGRAMME

Update Thursday 9 September 2021

* The lashing used for fastening the rauawa (top boards) to the hull of a waka ensuring its seaworthiness, representing the partnership between Māori, Government and Industry, and the collaboration of Te Ao Māori and Mātauranga Māori with mainstream science and technology.

Context

Aotearoa is presented with an opportunity to take a leadership role in aiding the reduction of global greenhouse gas (GHG) emissions, under He Waka Eke Noa.

Statistics about Māori agribusiness:

- a) Today Māori freehold land comprises a little over **1.7 million hectares**.
- b) There are 27,137 Māori freehold land titles and approximately 2.3 million ownership interests in those titles - Māori land is in multiple ownership.
- c) Nearly **60 percent** of Māori freehold land is concentrated in **Te Tai Tokerau, Waiariki and Te Tairāwhiti** - Many Māori landowners live away from their land
- d) Nearly **80% of Māori land** is of a less versatile land class (**class 6, 7 and 8**) and many parcels of Māori land are small and fragmented
- e) The legislation that administers Māori land is the **Te Ture Whenua Māori Act 1993**.
 - i. The underlying principles of the Act are the retention of Māori land and land utilization which are two competing principles
 - ii. Use of that land is severely restricted by the complexity of the rules, policies and regulations of the Te Ture Whenua Māori Act 1993.
 - iii. Until quite recently it was difficult for Māori land owners to access basic information about their land
- f) **Māori landowners face many challenges** with managing their whenua because the system in which they need to operate is **complex**, with rules and regulations that can be difficult to understand.

Context

Aotearoa is presented with an opportunity to take a leadership role in aiding the reduction of global greenhouse gas (GHG) emissions, under He Waka Eke Noa.

Any climate policy intervention must give **priority** to the **health and wellbeing of our land, water and environment**.

AND

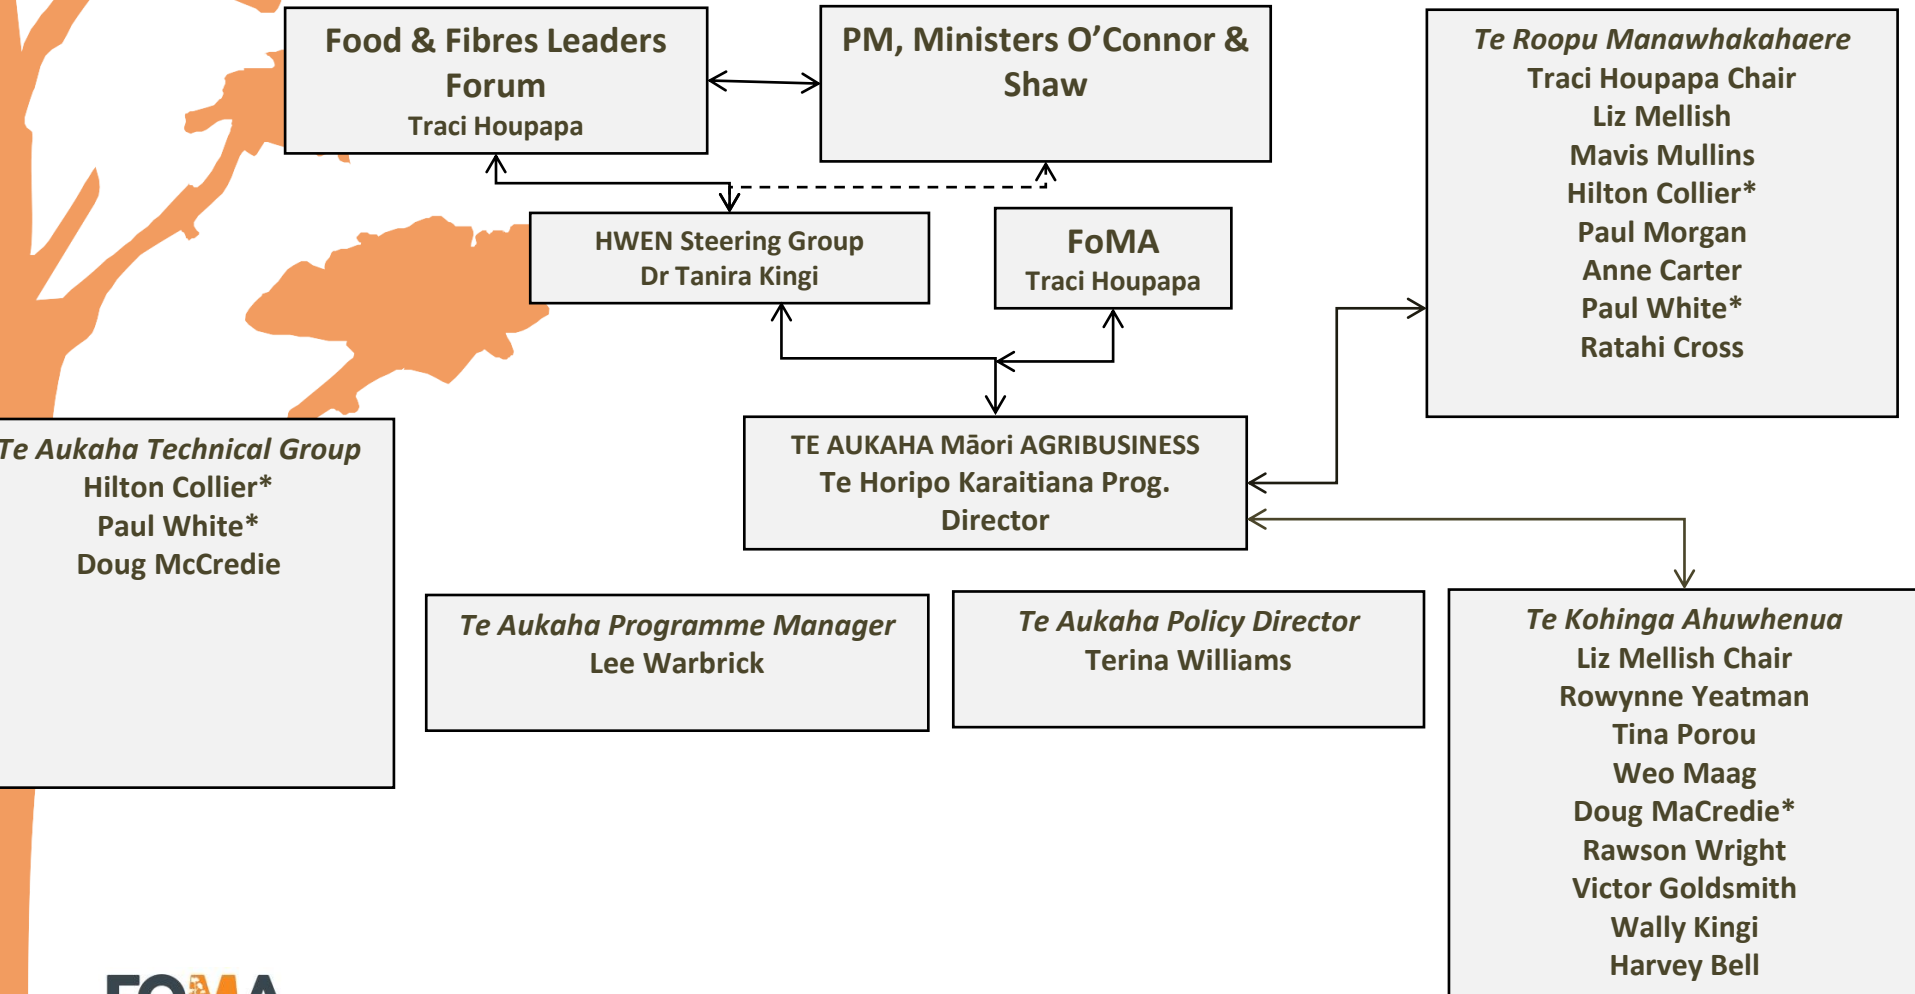

HWEN must avoid **adding another layer of complexity** that removes our ability to exercise our **rangatiratanga** over our lands.

A stylized orange silhouette of a tree with several branches and leaves, positioned on the left side of the slide.

He Waka Eke Noa – A Partnership for Climate Change

Programme Direction & Management

- a) Challenges to stand up the programme in 2020
- b) End of Jan gained momentum
- c) Funding 700k 1 July 2021 completed
- d) Sense that there is good and valued engagement at Programme management and Policy with HWEN programme office

Policy, Data & Insights

- a) our **taonga tuku iho**, including Te Taiao which is the broad environmental system, land and water.
- b) our role as **kaitiaki** of these treasures with the expectation that when it is our turn to pass on taonga we have protected the resource in a way that our children and grandchildren can enjoy.

HE MĀHERE TAIAO

Te Hau Ora o te Ao

Tiakina te taiao, Tiakina te Iwi.

Care for the environment, so it can sustain the people.

Policy, Data & Insights

- a) **Acknowledging Te Ao Māori** - A Te Ao Māori perspective must be integrated throughout all mahi, recognising the holistic lens through which intertemporal and interspatial matters related to climate change can be addressed.
- b) **Acknowledging Te Tiriti o Waitangi** - The Crown has significant Treaty obligations, including recognising Kawanatanga, Rangatiratanga and Oritetanga. The government's actions and inaction can constitute a breach of the Crown's duty of active protection.
- c) **Acknowledging Climate Change** - FOMA supports the science behind climate change and the contribution of the Māori agribusiness sector to this. However, the support to take action against climate change impacts is conditioned.
- d) **Acknowledging that Māori continue to be disadvantaged** - Actions, and inactions taken by the Crown have accumulated to the point that Māori continue to be disadvantaged. This must be corrected.

A stylized orange silhouette of a tree with several branches and leaves, positioned on the left side of the slide.

Policy, Data & Insights

The tension that exists within designing HWEN alongside Te Ao Māori is:

- a) The programme is aiming to balance emissions reductions with not placing the emissions burden on those that did not necessarily increase emissions growth (i.e., those that are under-developed or those that are early adopters). We note that Māori have maintained reciprocity and balance with their whenua.
- b) The programme aims to incentivise behaviours changes that conflict with our principles and values. We note that no decision should limit our tino Rangatiratanga.
- c) The programme is also challenging the capacity and capabilities of Māori agribusiness to participate and/or compete. We note that there have been numerous treaty breaches that have done this before.

Policy, Data & Insights

The HWEN programme has highlighted key areas that need to be addressed under **Te Tiriti o Waitangi**. The treaty is a partnership between Crown and Māori and often the burden lands on Māori to remind the crown of this. This includes not recognising or acknowledging:

- i. The historic and current contribution to nationwide emissions and sequestration efforts from Māori;
- ii. Historical actions and inactions from Crown that have led to the disenfranchisement and disparities that Māori agribusiness face;
- iii. Legislative barriers, including the complexities around governance structures and multiple regulatory systems; and
- iv. Accounting for sequestration from co-managed lands, and lands yet to be settled.

These treaty matters must be addressed directly with Crown, beyond the HWEN partnership – Rangatira ki rangatira.

Communications & Engagement

Stage 1: Awareness, Readiness

- Underway:
- Dr Tanira Kingi – Te Arawa 61,000ha (pasture 18,000ha, native 15,000ha, pre-1990 15,000ha, post 6,000ha) & Tūwharetoa 281,000ha (pasture 32,000ha, native 102,000ha, pre-1990 44,000ha, post 6,000ha)
- Paul White – Te Hiku
- Hilton Collier – Te Tai Rawhiti circa 71,000ha
- Direct engagement eg Anaru Smiler, Bob Cotterill, Alan Haronga – WMI, Awahohonu, Mangatu Blocks circa 54,000ha
- FoMA Members Chairs Meeting 26 Aug
- Comms plan includes hui, pānui & pataka matauranga

Science, Research Innovation & Technology

- NZ Agriculture Greenhouse Gas research Centre:
 - Doug McCredie & TeHoripo Karaitiana Advisory Board chaired by Chris Koroheke
 - Dr Tanira Kingi & Hilton Collier involved in research
- Jonny McGregor on Fit For a Better World - Science Accelerator Governance Group.
